

# Glacier2-SSLSessionManager

---

## Glacier2::SSLSessionManager

### Overview

#### interface SSLSessionManager

The session manager for SSL authenticated users that is responsible for managing [Glacier2::Session](#) objects. New session objects are created by the [Glacier2::Router](#) object calling on an application-provided session manager. If no session manager is provided by the application, no client-visible sessions are passed to the client.

### Operation Index

[create](#) — Create a new session.

### Operations

**[ "format:sliced" ] [Glacier2::Session](#)\* create([Glacier2::SSLInfo](#) info, [Glacier2::SessionControl](#)\* control) throws [Glacier2::CannotCreateSessionException](#)**

Create a new session.

Parameters

*info* — The SSL info.

*control* — A proxy to the session control object.

Return Value

A proxy to the newly created session.

Exceptions

[Glacier2::CannotCreateSessionException](#) — Raised if the session cannot be created.
