

# Database Environment Run Time Component

A Database Environment () represents a Berkeley DB database environment, used by the Freeze persistence service.

## Properties

The Database Environment Properties panel shows:

- **Description**  
A free-text description of this Berkeley DB database environment.
- **DB Home**  
The path to the home directory of this database environment, which corresponds to the Ice property `Freeze.DbEnv.env-name.DbHome`. It is often created by the IceGrid node in the server's private directory.
- **Properties**  
Berkeley DB configuration properties for this database environment. IceGrid generates a `DB_CONFIG` file in the DB Home directory with these properties.
