

IceGrid-FileParser

IceGrid::FileParser

Overview

interface FileParser

icegridadmin provides a [IceGrid::FileParser](#) object to transform XML files into [IceGrid::ApplicationDescriptor](#) objects.

Operation Index

[parse](#) — Parse a file.

Operations

[IceGrid::ApplicationDescriptor](#) parse(string xmlFile, [IceGrid::Admin*](#) adminProxy) throws [IceGrid::ParseException](#)

Parse a file.

Parameters

xmlFile — Full pathname to the file.

adminProxy — An Admin proxy, used only to retrieve default templates when needed. May be null.

Return Value

The application descriptor.

Exceptions

[IceGrid::ParseException](#) — Raised if an error occurred during parsing.
