

IceGrid-ServerInstanceDescriptor

IceGrid::ServerInstanceDescriptor

Overview

["cpp:comparable"] struct ServerInstanceDescriptor

A server template instance descriptor.

Used By

- [IceGrid::Admin::instantiateServer](#)
- [IceGrid::ServerInstanceDescriptorSeq](#)

Data Member Index

[template](#) — The template used by this instance.
[parameterValues](#) — The template parameter values.
[propertySet](#) — The property set.
[servicePropertySets](#) — The services property sets.

Data Members

string template;

The template used by this instance.

[IceGrid::StringStringDict](#) parameterValues;

The template parameter values.

[IceGrid::PropertySetDescriptor](#) propertySet;

The property set.

[IceGrid::PropertySetDescriptorDict](#) servicePropertySets;

The services property sets. It's only valid to set these property sets if the template is an IceBox server template.
