Ice-RequestFailedException

Ice::RequestFailedException

Overview

local exception RequestFailedException

This exception is raised if a request failed. This exception, and all exceptions derived from Ice::RequestFailedException, are transmitted by the Ice protocol, even though they are declared `local`.

Derived Exceptions

- Ice::FacetNotExistException
- Ice::ObjectNotExistException
- Ice::OperationNotExistException

Data Member Index

id — The identity of the Ice Object to which the request was sent.
facet — The facet to which the request was sent.
operation — The operation name of the request.
