Ice-AlreadyRegisteredException

Ice::AlreadyRegisteredException

Overview

local exception AlreadyRegisteredException

An attempt was made to register something more than once with the Ice run time. This exception is raised if an attempt is made to register a servant, servant locator, facet, object factory, plug-in, object adapter, object, or user exception factory more than once for the same ID.

Data Member Index

kindOfObject — The kind of object that is registered already: "servant", "servant locator", "object factory", "plug-in", "object adapter", "object", or "user exception factory".
id — The ID (or name) of the object that is registered already.
