

Ice-SyscallException

Ice::SyscallException

Overview

local exception SyscallException

This exception is raised if a system error occurred in the server or client process. There are many possible causes for such a system exception. For details on the cause, [error](#) should be inspected.

Derived Exceptions

- [Ice::FileException](#)
- [Ice::SocketException](#)

Data Member Index

[error](#) — The error number describing the system exception.

Data Members

int error;

The error number describing the system exception. For C++ and Unix, this is equivalent to `errno`. For C++ and Windows, this is the value returned by `GetLastError()` or `WSAGetLastError()`.
