

Ice-Instrumentation-ThreadObserver

Ice::Instrumentation::ThreadObserver

Overview

local interface ThreadObserver extends [Ice::Instrumentation::Observer](#)

The thread observer interface to instrument Ice threads. This can be threads from the Ice thread pool or utility threads used by the Ice core.

Used By

- [Ice::Instrumentation::CommunicatorObserver::getThreadObserver](#)

Operation Index

[stateChanged](#) — Notification of thread state change.

Operations

void stateChanged([Ice::Instrumentation::ThreadState](#) oldState, [Ice::Instrumentation::ThreadState](#) newState)

Notification of thread state change.

Parameters

oldState — The previous thread state.

newState — The new thread state.
