

Live Deployment Tab

The Live Deployment tab shows the run-time status and configuration of an existing IceGrid deployment, and allows you to perform various administrative tasks on this deployment, such as:

- start or stop a server
- retrieve metrics associated with a server
- display metrics from one or more servers on a graph
- enable or disable a server
- send signal to a server
- retrieve the log files of a server
- patch an entire application
- register a new "well-known" object with the IceGrid registry
- undeploy a deployed application
