Database Environment Run Time Component

A Database Environment (▤) represents a Berkeley DB database environment, used by the Freeze persistence service.

Properties

The Database Environment Properties panel shows:

- **Description**
  A free-text description of this Berkeley DB database environment.

- **DB Home**
  The path to the home directory of this database environment, which corresponds to the Freeze property `Freeze.DbEnv.env-name.DbHome`. It is often created by the IceGrid node in the server's private directory.

- **Properties**
  Berkeley DB configuration properties for this database environment. IceGrid generates a `DB_CONFIG` file in the DB Home directory with these properties.
