

Ice.IPv6

Ice.IPv6

Synopsis

`Ice.IPv6=num`

Description

Specifies whether Ice uses IPv6. If *num* is a value greater than zero, IPv6 is enabled. If not specified, the default value is 1 if the system supports the creation of IPv6 sockets, and 0 otherwise.

Platform Notes

Java

Java's default network stack always accepts both IPv4 and IPv6 connections regardless of the settings of `Ice.IPv6`. You can configure the Java run time to use only IPv4 by starting your application with the following JVM option:

Java
<pre>java -Djava.net.preferIPv4Stack=true ...</pre>
