

Ice-DNSException

Ice::DNSException

Overview

local exception DNSException

This exception indicates a DNS problem. For details on the cause, [error](#) should be inspected.

Data Member Index

[error](#) — The error number describing the DNS problem.

[host](#) — The host name that could not be resolved.

Data Members

int error;

The error number describing the DNS problem. For C++ and Unix, this is equivalent to `h_errno`. For C++ and Windows, this is the value returned by `WSAGetLastError()`.

string host;

The host name that could not be resolved.
